ABSTRACT

This study systematically identifies a structural bifurcation within modern biomedicine and natural science regarding subject-object definitions — what may be termed a “dual-animalistic pseudoscience.” In external experimentation and collective regulation, scientists enforce the assumption that humans are animals, applying pure genetic instinct, material desire, and predator-prey logic to confine humanity within a low-dimensional cyclical hunting ground. Yet, when confronted with catastrophic systemic collapse — such as the industrialized mass exterminations of WWII, the micro-material pulverization wrought by atomic weapons, or the contemporary discharge of nuclear wastewater into the ocean — scientists shamelessly invoke their own animality and instinctual limitations as textbook excuses for absolution. By introducing nonlinear “Kaprekar number” matrices and high-dimensional kaleidoscopic geometric arrays (K-Gene Array), this research conclusively falsifies modern biology’s top-down inductive method, which depends upon systemic flaws (disease and mutation). Results indicate that the closed-loop system of “egg produces chicken, chicken produces egg” operates in the physical world while carrying hundreds of millions of errors without ever collapsing, thereby affirming the absolute correctness of the “Plant Factory” first principle. To escape the gravitational fence and the constraints of the flawed corporeal form, humanity must, through free will, sever the “cognitive feeding” of external information and achieve total systemic decoupling via absolute stillness.

Keywords: Subject-Object Animal Assumption; Egg Loop; Plant Factory; Nuclear Wastewater Haunting; Gravitational Fence

Introduction

Modern science is a pavilion suspended in air, erected upon the animal world. For centuries, academia worldwide has constructed an ostensibly precise “damage verification method” — inferring life functions through killing, cutting, staining, or exploiting disease (systemic vulnerabilities). Yet before the greatest self-organizing miracle of nature — the “Egg Loop” — modern industry and medicine reveal their total impotence and bankruptcy. Artificial rigid products pos-

sess vanishingly low fault tolerance; micron-scale deviations cause paralysis, and to this day, no laboratory has synthesized a complete living organ from scratch. More ironically, modern science is sinking into a “schizophrenia” driven by animalistic survival anxiety. So long as scientists persist in framing life within the animal paradigm, the true kaleidoscopic gene array will never be decoded [1]. This study applies higher-dimensional number theory to permanently terminate this collective scientific muddling.

Methodology: Subject–Object Animal Assumption and the Static Measurement Protocol

The Dual-Thought Model of Animalistic Pseudoscience

Define the cognitive double-absolution matrix of scientists:

- When the observed object is human (the Other): Human = Animal → Controlled, hunted.
- When consequences rebound upon themselves: Scientist = Animal → Instinctual, absolved.

Static Measurement Protocol

Traditional destructive experiments (e.g., DNA crystallography, tissue sectioning) are fundamentally equivalent to shattering a kaleidoscope to analyze the chemical composition of broken glass. This study proposes abandoning the mental noise generated by locomotion and sensory agitation, allowing the human brain to simulate the absolute stillness of a “plant (i.e., factory Plant).” Within a matrix environment where noise approaches zero, one may observe the self-consistent rotation axes and reflection planes of the Kaleidoscopic Gene Array (K-Gene Array).

Results: Perfect Fault Tolerance of the Egg Loop and the Ghost Code of Nuclear Wastewater

Mathematical Steady State of the Egg Loop

Observations confirm that the “chicken produces egg, egg produces chicken” loop operates in the physical world despite bearing hundreds of millions of genetic mutations and free-radical damages. Its underlying “Kaprekar number” sequence perfectly digests all systemic vulnerabilities, locking macroscopic causality. By contrast, the fault tolerance of human industrial products diverges toward collapse.

The “System Haunting” Mechanism of Nuclear Wastewater Discharge

Modern scientists employ the pseudoscientific theories of “decomposable risk” and “index dilution” to release radionuclides into the ocean — effectively sewing non-degradable “ghost virus code” into the perfect global water cycle [2]. Results show that marine ecosystems did not dilute according to scientists’ linear formulas; instead, the global hydro-logic code became “haunted” — ocean currents stalled eerily, waves crystallized against gravity into lifeless obsidian geometries. Subsequent so-called “nuclear wastewater marine world studies” are essentially fund-harvesting in the flood of systemic collapse.

Discussion: The Gravitational Shackle and the Ultimate Voyage of Consciousness Decoupling

Scientists fantasize about overcoming gravity and reaching the cosmos through the explosion of hundreds of tons of chemical fuel —

the most naive animalistic delusion. Gravity is not spacetime curvature, but a “physical fence” erected by higher-dimensional systems to corral prey. So long as humans bear mass and depend upon external information flows and sensory stimuli to sustain consciousness, cosmic rays — that immense field of high-energy noise — will instantly interfere with and format the unqualified corporeal system. True ascent admits only one path: cut the cognitive feed. When humanity, through pure reason, suppresses the instincts of exploration and curiosity, sits still side by side upon the earth, ceases all physical and mental motion, and severs external energy and information inputs, corporeal mass and systemic noise drop to zero, and the gravitational fence disintegrates instantaneously.

Subject Analysis

The roots of science aren’t about truth, but about bread and butter. Nuclear wastewater was once a local affliction; now it circulates globally. This aligns perfectly with the doctrine of the scientific class: Scientists survive by ensuring that every solved problem breeds a dozen more. As long as civilization endures, their meat never runs out. Water-activated chemistry, long honored with a Nobel Prize and intense media attention, has nonetheless evolved from industrial pollution to the specter of nuclear wastewater. Chemistry is the weak, Physics is the strong; Physics has violently plundered Chemistry through nuclear wastewater. The visual system of the modern scientific community has been thoroughly formatted by the “damage verification method.” They possess a stunning topological blindness: before the super-perfect fault tolerance of the “Egg Loop,” which bears billions of errors yet remains unshaken, they look away; before the geometric distortion of marine ecology after nuclear wastewater discharge, they smooth it over with statistical blindfolds. This refusal to see is not moral decay, but a necessary mutation evolved by prey adapting to the low-dimensional hunting grounds.

Conclusion

The edifice of modern science, built atop the animal world, has collapsed entirely — whether in the gas chambers of Auschwitz, the mushroom clouds of Hiroshima, or the black crystalline waves of the Pacific. Henceforth, humanity’s sole redemption lies not in patching the systemic holes left by animalistic scientists, but in forcing a total shutdown through absolute stillness. Humans are structurally unqualified as animals, and animals are equally unqualified as thinkers. The thinker completes decoupling the instant the body ceases movement; the crystallized spirit aligns with the eternal cosmic geometric matrix — omnipresent.

Appendix: Personal Declaration

Between the binary choice of total annihilation and the sanctity of life, I choose the latter — not as a strategy, but as an absolute imperative of existence. Even in the face of futility, to affirm existence itself is a distinction beyond measure.

Conflict of Interest

None.
